

UltraCrete Brings Joy to Students at Portuguese School

Instarmac's Portuguese partner, Asfaltovia, have supplied UltraCrete Instant Road Repair[®] Red to a local school to help them create a new playground for their students.

CONTRACTOR: ASFALTOVIA

MATERIALS: INSTANT ROAD REPAIR[®] RED

Domus Social – Empresa de Habitação e Manutenção do Município do Porto, E.M. required a red asphalt to complete their new playground at local school EB Caramila in Oporto, Portugal. The required asphalt needed to provide a permanent finish and cause as minimal disruption as possible to the daily routine of the school.

In previous projects of this size, CCR Engenharia – Construção Corte Recto, the chosen contractor for this project, had used hot asphalt as the finishing surface. However, access to the playground was very limited and therefore was not possible to get the machinery needed to lay hot asphalt – an alternative product was required!

UltraCrete Instant Road Repair[®] Red is available in 25kg buckets which allowed the contractors to gain access to site easily, without the need for large equipment. The bucket can also be re-sealed and used another day which meant that no product goes to waste.

What's more, Instant Road Repair Red has been independently tested and approved by the Highways Authority Product Approval Scheme (HAPAS) for over 10 years, and is proven to be a quality, flexible and durable solution for first time, permanent repairs. Applied in 3 easy steps – clean, pour, compact

– UltraCrete Instant Road Repair[®] Red can be applied in all weathers - including the sweltering temperatures in Portugal – and can be trafficked instantly which meant the students of EB Caramila school could enjoy their new playground in no time at all!

Not only is UltraCrete Instant Road Repair[®] Red suitable for repairs in roads and footpaths, the colour of this cold lay asphalt means it is also ideal for repairs to cushions and ramps, bus lanes, cycle tracks, bus stops and colour coded car parks.
