

UltraTile helps Bella Italia create bold new Mediterranean design

Bellas nationwide are getting a fun and fab new makeover!

CONTRACTOR: THE GREAT NORTHERN TILING COMPANY

MATERIALS USED: PROFLEX SP AND PROFLEX SPES

Creating this colourful, quirky new Italian style dining experience is commercial wall and floor tiling contractors, The Great Northern Tiling Company (GNTC), using UltraTile adhesives.

A TTA member and esteemed UltraTile partner, GNTC secured the commercial contract for the Beckton restaurant's makeover. The prestigious contract included kitchen, front of house, toilet and bar areas, all of which had their own distinctive type of tile from 400mm squared to brick slips and mosaics. GNTC choose to use their preferred adhesives UltraTile ProFlex SP and ProFlex SPES throughout the project.

Both adhesives are S1 classified, can be laid at depths up to 20mm and are available in a choice of

white or grey. ProFlex SP has a pot life of 1 hour and is rapid setting allowing grouting to commence after 2.5 hours. ProFlex SPES its sister product boasts all the same great qualities with an extended pot life, ideal for intricate work, of 2 hours and a set time of 16 hours.

The adhesives are suitable for fixing porcelain, glass, mosaic and natural stone tiles. They can be used on either walls or floors, internally or externally and with underfloor heating or on swimming pool installations.

Billy Lockwood, GNTC states: "We use UltraTile products because of their competitive prices and their high quality performance." Several other Bella Italia restaurant makeovers were also completed last year by GNTC using UltraTile.
