

Service like you've never experienced before

When it comes to highway maintenance and repair, UltraCrete truly stands out from the crowd.

MATERIALS USED: ENVIROBED CD534, TOUGH PATCH, SCJ, INSTABAND ECO, MORTAR BUOY

We sat down with Assistant Operations Manager at an Essex-based highways firm to learn more about what makes UltraCrete's service so exceptional.

"We predominately use Envirobed CD534® bedding mortar, Tough Patch PCSM, SCJ and overbanding with Mortar Buoy. When reinstating gullies, Mortar Buoy and Envirobed CD534® Flowable have been a flawless solution in the most highly trafficked areas."

He continued: "All of the products we use are high performing and reliable. Our Area Sales Manager provides us with the most professional and knowledgeable service and the office staff are always accommodating when we have a surge in demand and are always able to provide a timely delivery."

When asked about the key benefits of working with UltraCrete, the Assistant Operations Manager shared: "UltraCrete have been a very hands-on supplier. Not only do they provide us with the materials we need on a daily basis, but they also support us with training and best practice applications with all their products. This has saved us valuable time and money and has reduced our defect rates."
