Haven Holiday Park

Introduction:

Ultra Tile adhesives, ProRapid RS and ProFlex SP have been used in the indoor swimming pool complex refurbishment at Haven's holiday park in Lincolnshire.

Action:

The Great Northern Tiling Company were commissioned to tile the swimming pool complex and changing village. The work was completed in February to ensure a pre-holiday season finish date.

Tiling was completed using one of Ultra Tile's best-selling cementitious adhesives, ProFlex SP (SP) and a firm favourite of The Great Northern Tiling Company, ProRapid RS (RS).

SP is a single part product, polymer modified for increased bond strength and enhanced performance with flexibility conforming to S1.

What's more, the water resistance of SP makes it suitable for use in wet areas and swimming pools.

ProRapid RS is a rapid set, high strength and flexible product, ideal for porcelain and natural stone tiles.

Both adhesives have a pot life of 40 minutes, a set time of 2.5 hours, conform to C2 FT and are available in a choice of white or grey. They are suitable for use in conjunction with underfloor heating systems, may be used on walls or floors in internal or external conditions and are frost-resistant.

Results:

Mark from The Great Northern Tiling Company comments that: "Golden Sands has been one of the most prestigious jobs that we have completed so far this year. It included fixing a variety of tiles in a number of designs - some very intricate - but all went well due to the performance and ease of SP and RS."
